

Prescription Information

This treatment plan contains important information regarding the medication that was prescribed to you by your doctor. The following includes: ingredient information, side effects, dosing instructions, proper storage, and other information important for you to know before starting treatment.

What is this medication used for?

Zero Crave can be prescribed to help adults with obesity or excess weight and weight-related diseases lose weight and reduce food cravings when used regularly and as prescribed. Zero Crave is meant to be combined with regular exercise and a healthy reduced-calorie diet. These medications are compounded in licensed U.S. compounding pharmacies.

Active Ingredients (may contain):

Bupropion

Naltrexone

Methylcobalamin (Vitamin B12)

What is Zero Crave Rx?

Zero Crave is a compounded medication that contains the active ingredients Bupropion, Naltrexone, and Methylcobalamin (Vitamin B12). This medication is designed to help with weight management and reduce food cravings.

Why is Vitamin B12

(Methylcobalamin) included in this formula?

Vitamin B12 (Methylcobalamin) is added to Zero Crave for its ability to aid in healthy metabolism regulation. Low B12 levels have been associated with a slow metabolism and increased body fat, so making sure you are not deficient is important to your weight loss journey.

Some people may also find that B12 gives them an energy boost, helping them to incorporate more movement into their day.

How does Zero Crave Rx help with weight loss?

Zero Crave contains Bupropion which is an antidepressant medication that has been shown to decrease appetite. Zero Crave also contains Naltrexone which is an opioid antagonist that may curb hunger and food cravings. Methylcobalamin (Vitamin B12) is added as a supplement since studies have linked low B12 levels to increased body fat and reduced metabolism. Altogether, people may find that their appetite is reduced and experience fewer food cravings.

What is the best way to use this medication?

Zero Crave is an oral medication that you take by mouth. Do not spit, crush, or

open the capsule to use this medication—swallow the capsule whole only. Your dosing schedule may vary depending on your tailored prescription plan from your doctor after your consultation. However, the general dosage for Zero Crave is one capsule in the morning for 1 week, one capsule in the morning and one capsule at night for week 2, two capsules in the morning and one capsule at night for week 3, and two capsules at night for week 4 and onward..

How should I store this medication?

Store the Zero Crave Rx capsules in the original container in a cool, dry environment, at room temperature (68F-77F). Always make sure the container is tightly closed when not using the medication. Keep all medications in a safe place out of reach of pets and children.

What should I tell my doctor before starting this medication?:

Before starting Zero Crave, you should let your doctor know your weight, your BMI, and about any weight-related diseases or problems you are currently experiencing (high blood pressure, high cholesterol, type 2 diabetes). You should also let your doctor know about any health conditions you currently have or have had in the past including: depression, suicidal thoughts, bipolar disorder, uncontrolled high blood pressure, eating disorders, seizures, opioid addiction, heart conditions, kidney disease, liver disease, and alcohol abuse. Your doctor should know about all of the medications and supplements you are taking. Certain medications may interact with Zero Crave or be dangerous to use together. Let your doctor know if you are currently using or have used the following in the recent past: antidiabetic medications, opioid medications, other medications containing Bupropion, other medications containing Naltrexone, MAOI antidepressants, seizure medications, and sedative medications.

What are the common side effects of this medication?:

The most common side effects of Zero Crave may include: Nausea, vomiting, constipation, diarrhea, dizziness, headache, dry mouth, trouble sleeping, anxiety, hot flashes, fatigue, or tremors. These side effects may subside as you continue on the medication, or may be able to be managed with at-home strategies or OTC medications. For a more detailed list of the possible side effects of Zero Crave look at the patient safety information on our website and the Zero Crave package information.

Allergies:

Do not take this medication if you are allergic to Bupropion, Naltrexone, or any medications that contain these ingredients. Get emergency medical help if you have signs of an allergic reaction: hives, difficulty breathing, swelling of your face, lips, tongue, or throat.
